Software engineer with professional experience developing enterprise backend services, embedded software integrations, and automation solutions. Strong background in Java, Grails, system troubleshooting, and performance testing, with a demonstrated ability to improve engineering efficiency and support complex production environments. Experienced in delivering reliable software solutions, collaborating across technical teams, and driving improvements from development through deployment.

Work Experience

Software Engineer — **Xerox** — **July 2022–Present**
SDI - Global Professional Services — Lexington, Kentucky

- Designed and developed Java-based backend services and embedded systems, improving scalability, reliability, and maintainability across enterprise environments.
- Supported embedded software and computer-engineering systems within enterprise multifunction devices.
- Developed internal tools, automation, and performance tests that reduced troubleshooting effort and accelerated integration testing by 40%.
- Led print-management deployments across dozens of customer fleets, reducing manual configuration time by approximately 30%.
- Owned backend services and integrations, troubleshooting complex behavior across environments and improving long-term system stability.
- Selected for the Technical Leadership Mentoring program and recognized for innovative contributions in internal hackathons focused on cloud-connected product capabilities.

Software Engineer — **Freelance** — **2020–Present**
Lexington, Kentucky

- Designed and built a mobile business application to centralize order management, customer data, and operational workflows, reducing downtime by 35%.
- Designed and developed responsive web applications using modern frontend technologies, creating intuitive user experiences across desktop and mobile devices.
- Developed business applications supporting order management, inventory tracking, and streamlined operational workflows.
- Configured application hosting and deployment workflows to publish web applications and maintain reliable production environments.
- Applied modular architecture, version control, and structured troubleshooting practices to deliver maintainable software solutions.

Education and Certifications

- **B.Sc. Computer Science,** Western Governor's University, Utah. **2018–2020**
  - Graduated early due to advancing through courses at an accelerated pace.

Technologies and Languages

- Languages: Java, Groovy, Javascript, PHP, Python
- Technologies: Spring Boot, React, Grails, Node.js, Flutter, MySQL, Git
- Other: Azure, Google Cloud, RESTful APIs, Microservices

Projects

- **Cottage Sourdough Bakery App**
  - Designed and developed a full-stack web application for a cottage sourdough bakery, delivering a responsive, user-friendly experience for showcasing products and managing customer interactions.
  - Built and integrated frontend components with backend services and database functionality to support dynamic content and application workflows.
  - Implemented cloud-based infrastructure and deployment workflows to support application hosting, data management, and ongoing maintenance.
  - Applied modern web development practices, including REST API integration, responsive UI design, version control, and iterative development.
- **Cat Cafe Website**
  - Designed and developed a responsive website for a cat café, translating the business's brand identity into a whimsical, cottagecore-inspired digital experience.
  - Built user-focused pages to showcase café offerings, cat lounge experiences, events, and the organization's mission while improving accessibility and usability across desktop and mobile devices.
  - Implemented website navigation, domain configuration, and hosting deployment to establish a functional online presence for the business.
  - Evaluated and integrated third-party services for booking, payment processing, and customer engagement to support business operations and future growth.
  - Collaborated with the business owner to define website requirements, refine visual design, and align functionality with customer needs and business goals.
- **Food Truck Management App Prototype**
  - Designed and developed a cross-platform mobile application prototype using Flutter and Dart to streamline food truck operations and business management.
  - Built reusable UI components and interactive screens to support core workflows, prioritizing intuitive navigation and a responsive user experience.
  - Structured application architecture to support modular development, maintainability, and future integration with backend services and persistent data storage.
  - Translated business requirements into functional application features, demonstrating mobile development skills, rapid prototyping, and iterative UI/UX design.
  - Established a foundation for future enhancements, including inventory tracking, menu management, sales reporting, and operational analytics.
- **Portfolio Website**
  - Designed and developed a personal portfolio website to showcase software engineering projects, technical expertise, and professional experience through a modern, responsive user interface.
  - Implemented reusable frontend components and intuitive navigation to present projects, technical skills, and professional accomplishments across desktop and mobile devices.
  - Integrated project demonstrations, descriptions, and relevant technologies to highlight full-stack development capabilities and practical problem-solving experience.
  - Managed source control, deployment, and ongoing improvements, applying modern web development practices to maintain a professional online presence.
  - Optimized site structure, usability, and presentation to support professional networking, project discovery, and career advancement.

Interests

- I am an avid reader of science fiction novels
- I enjoy teaching myself new things and am currently learning Japanese.
